Adding a Host to the Device Map In TechAlert

TechAlert · https://vettedsecuritysolutions.com/docs/adding-a-host-to-the-device-map/

Locate the Device Map

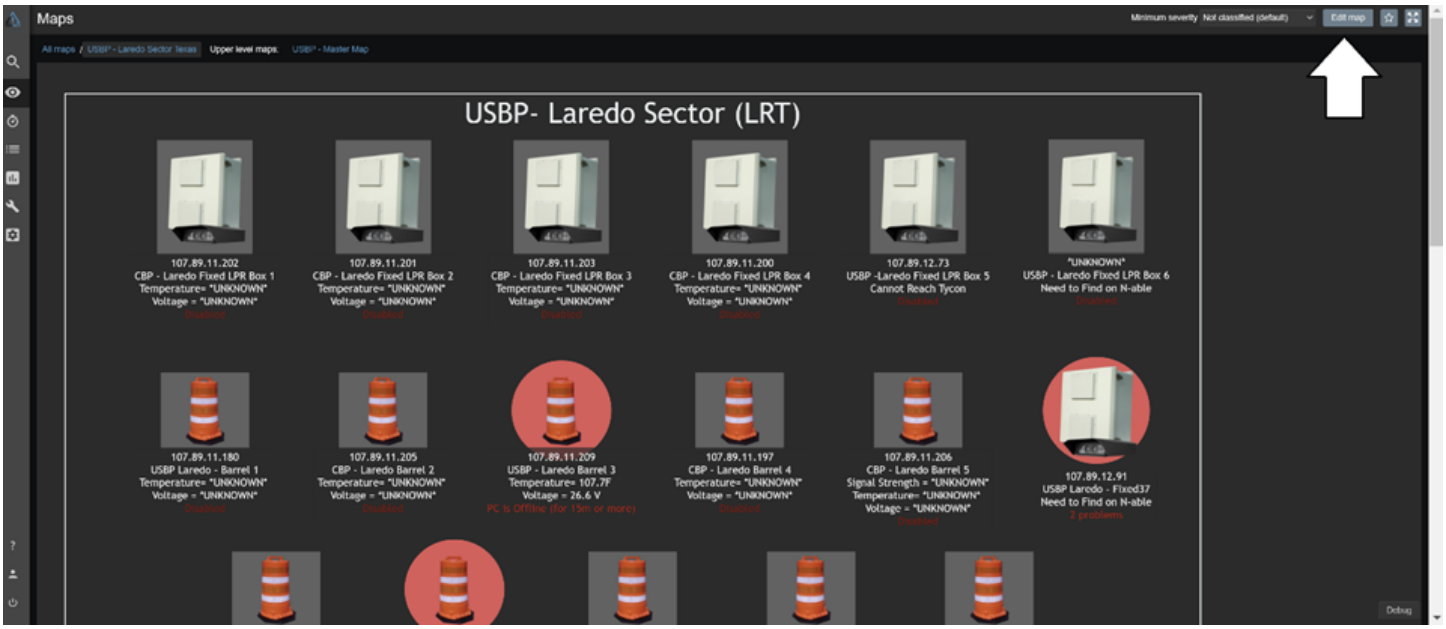

From the left-hand menu, navigate to **Monitoring**

Locate **Maps** and select the map you wish to edit.

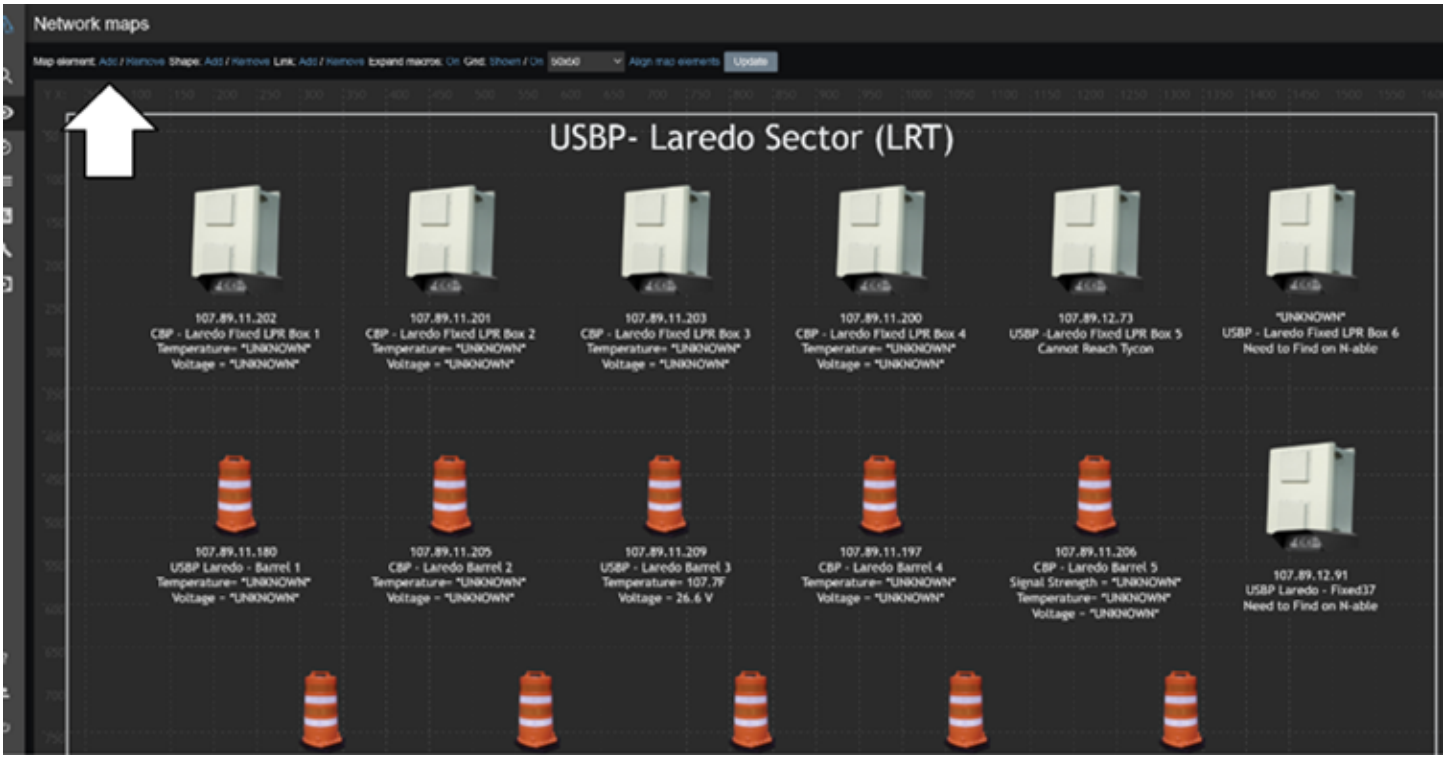

Edit the Map

Select **Edit Map** at the top right of the page.

Add a New Element

At the top left of the page, next to **Map Element**, select **Add**.

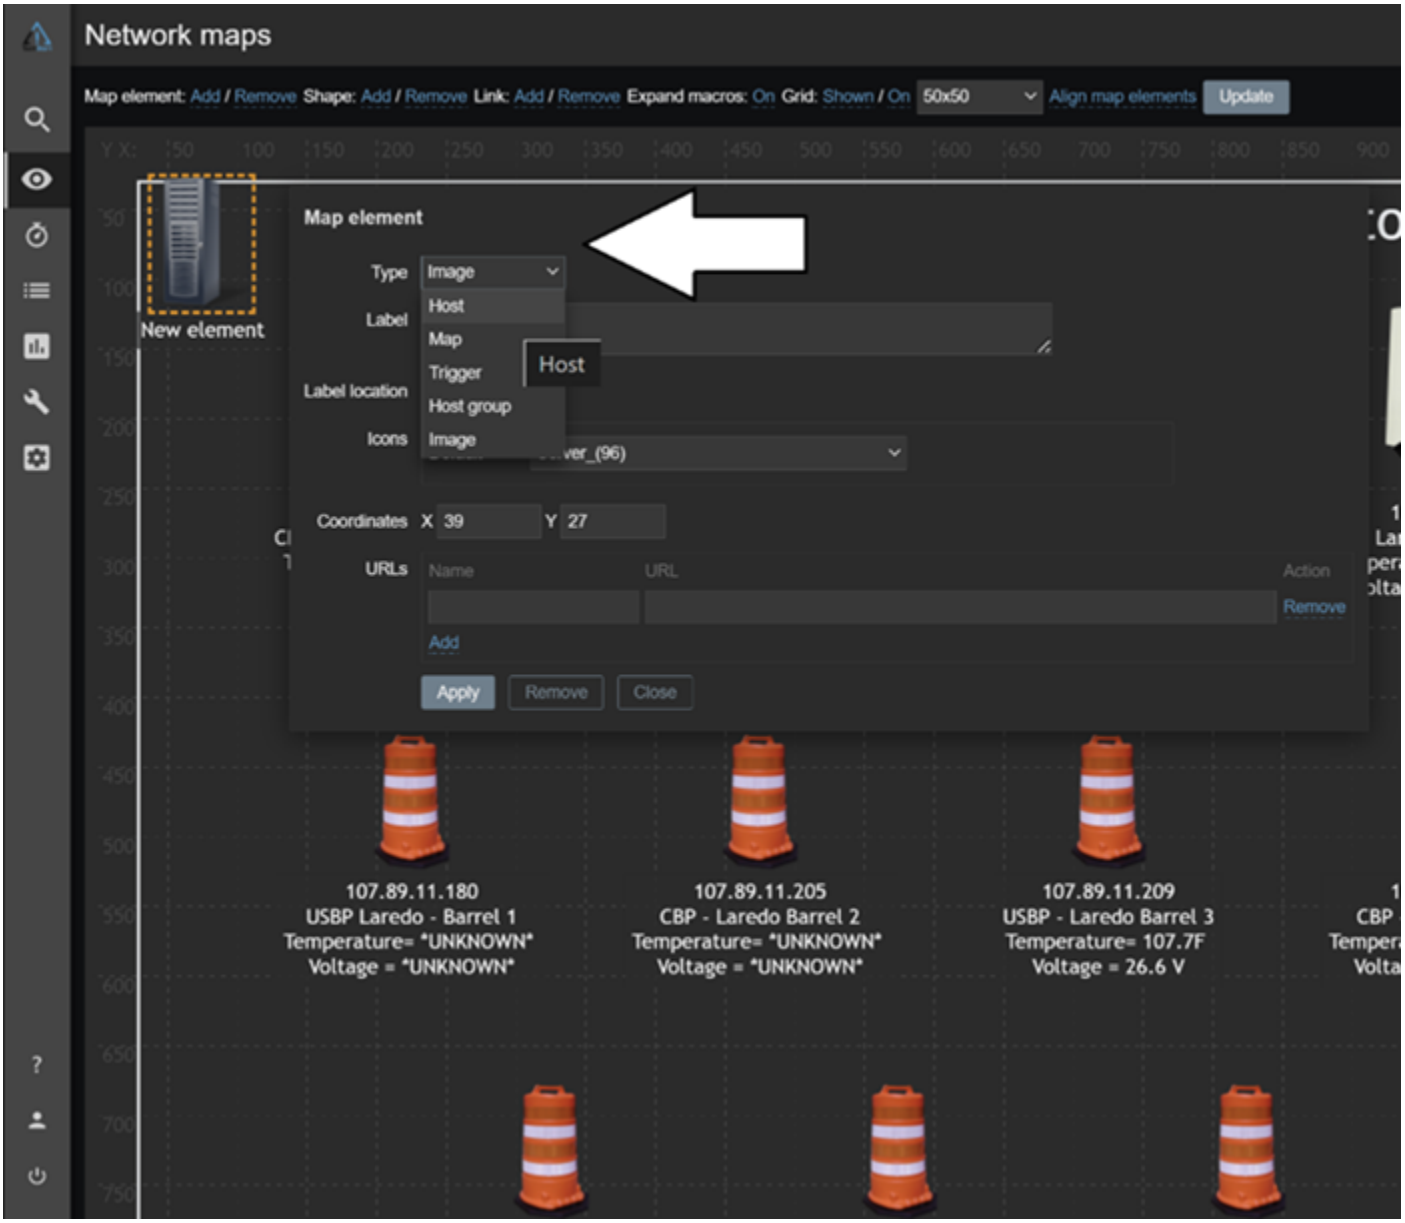

Select the New Icon

Click on the new element (icon) that appeared on the map.

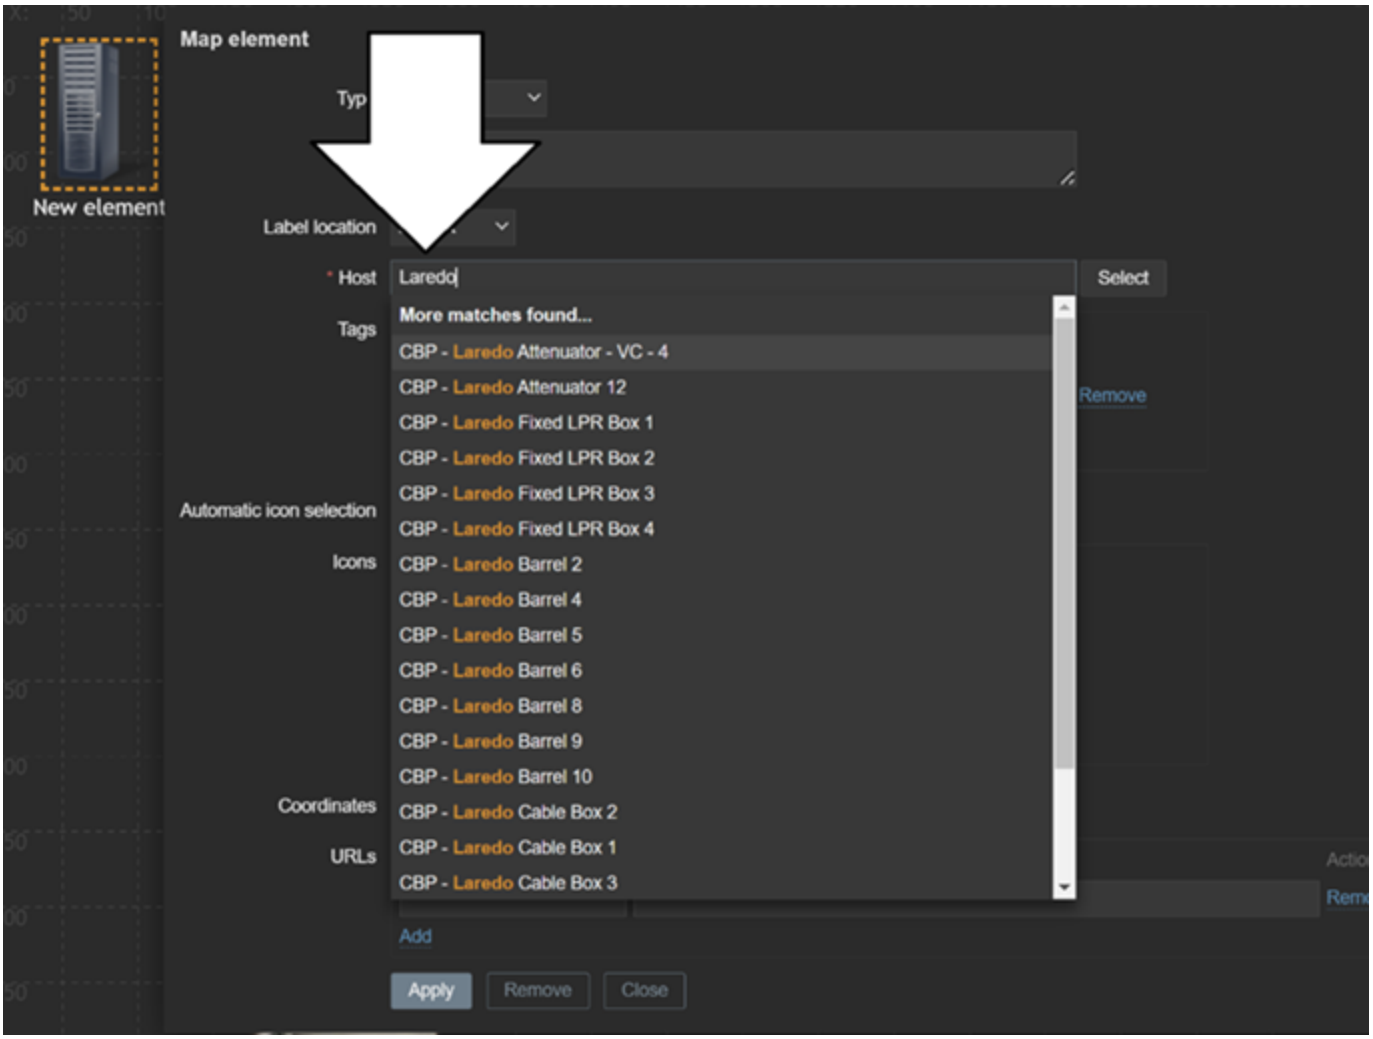

Change Element Type

In the new window, change the **Type** to **Host**.

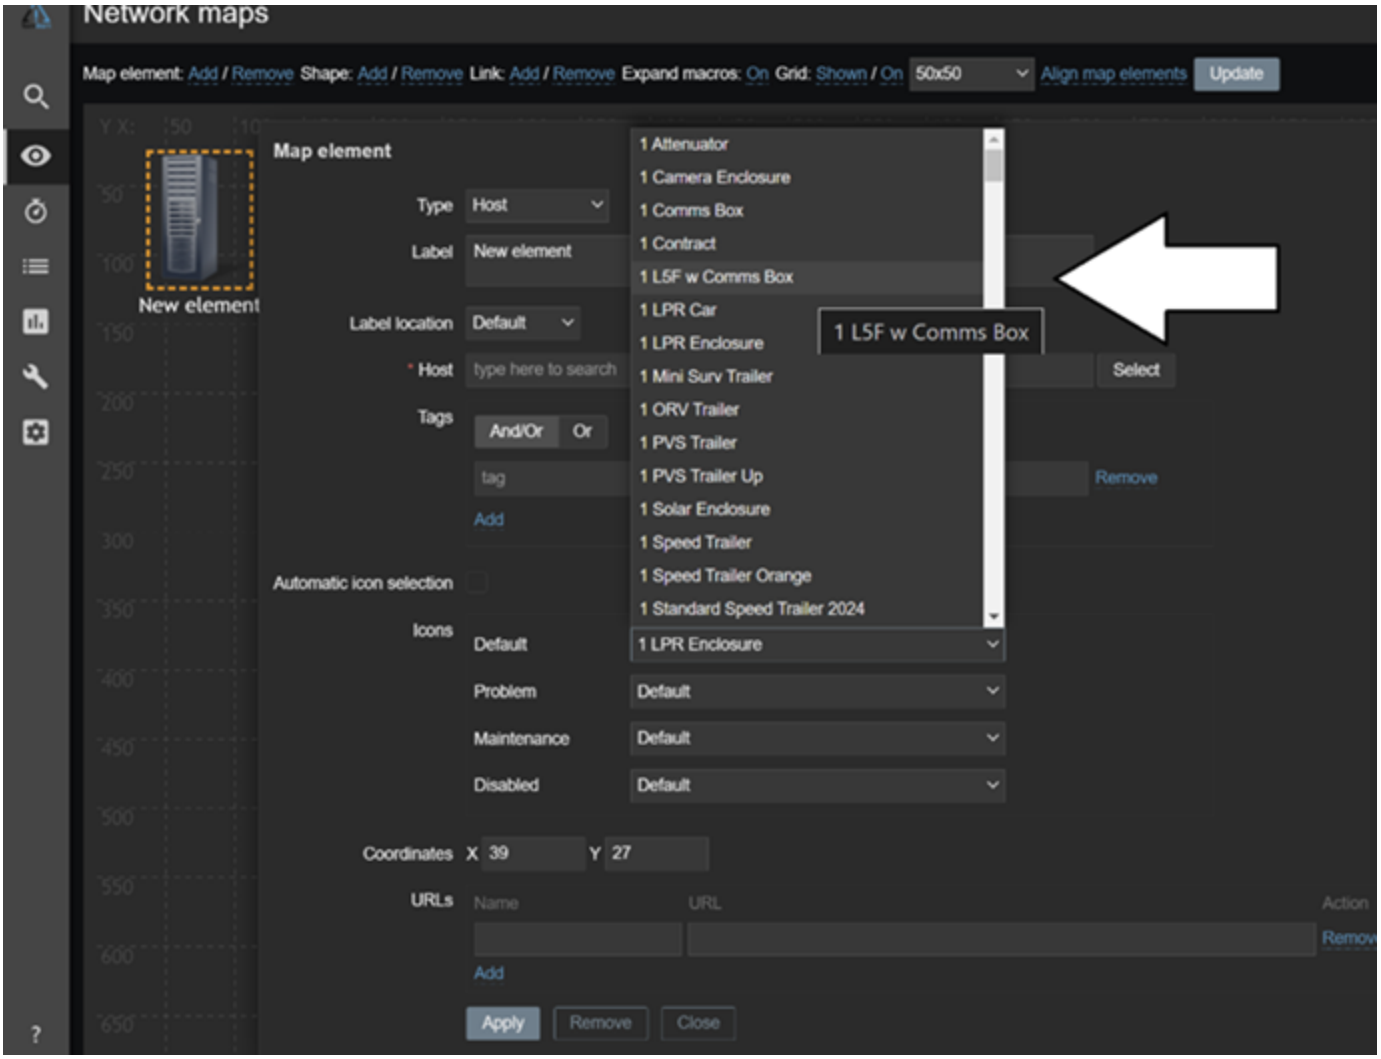

Search for Host

In the **Host** field, search for the host you want to add.

Select an Icon

In the I**con** field, choose the icon that best represents the system you're working on. Leave other fields labeled as **default**.

Add a Label

In the **Label** field, input the necessary code for each device in the system. Refer to your TechAlert Map Label Reference Guide for the appropriate lines to enter.

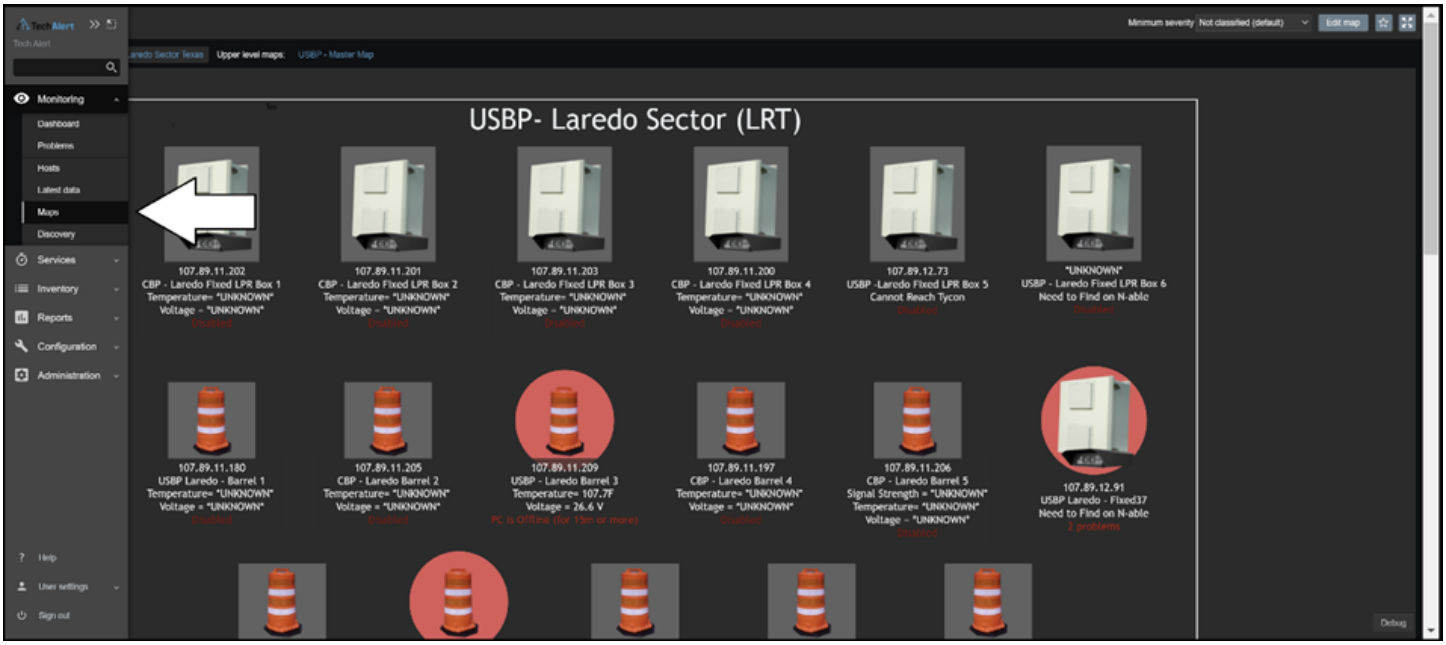

Add URLs

Add URLs at the bottom for each link you wish to display on the map. URLs typically provide access to the web interface of devices in the system. Ensure the port numbers match the port forwarding configurations on the router.

Examples:

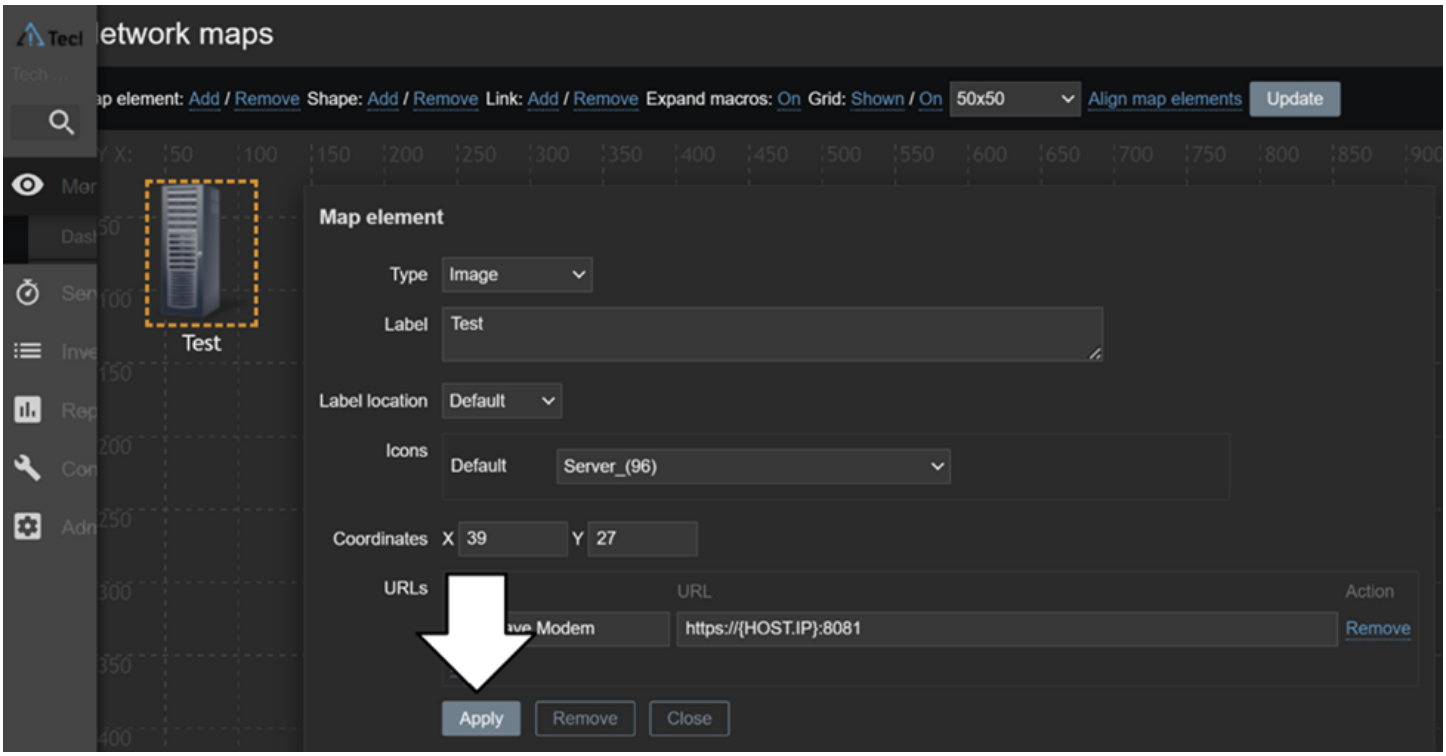

Name: Pepwave Modem / URL: https://{HOST.IP}:8081

Name: Tycon Power Management / URL: https://{HOST.IP}:88

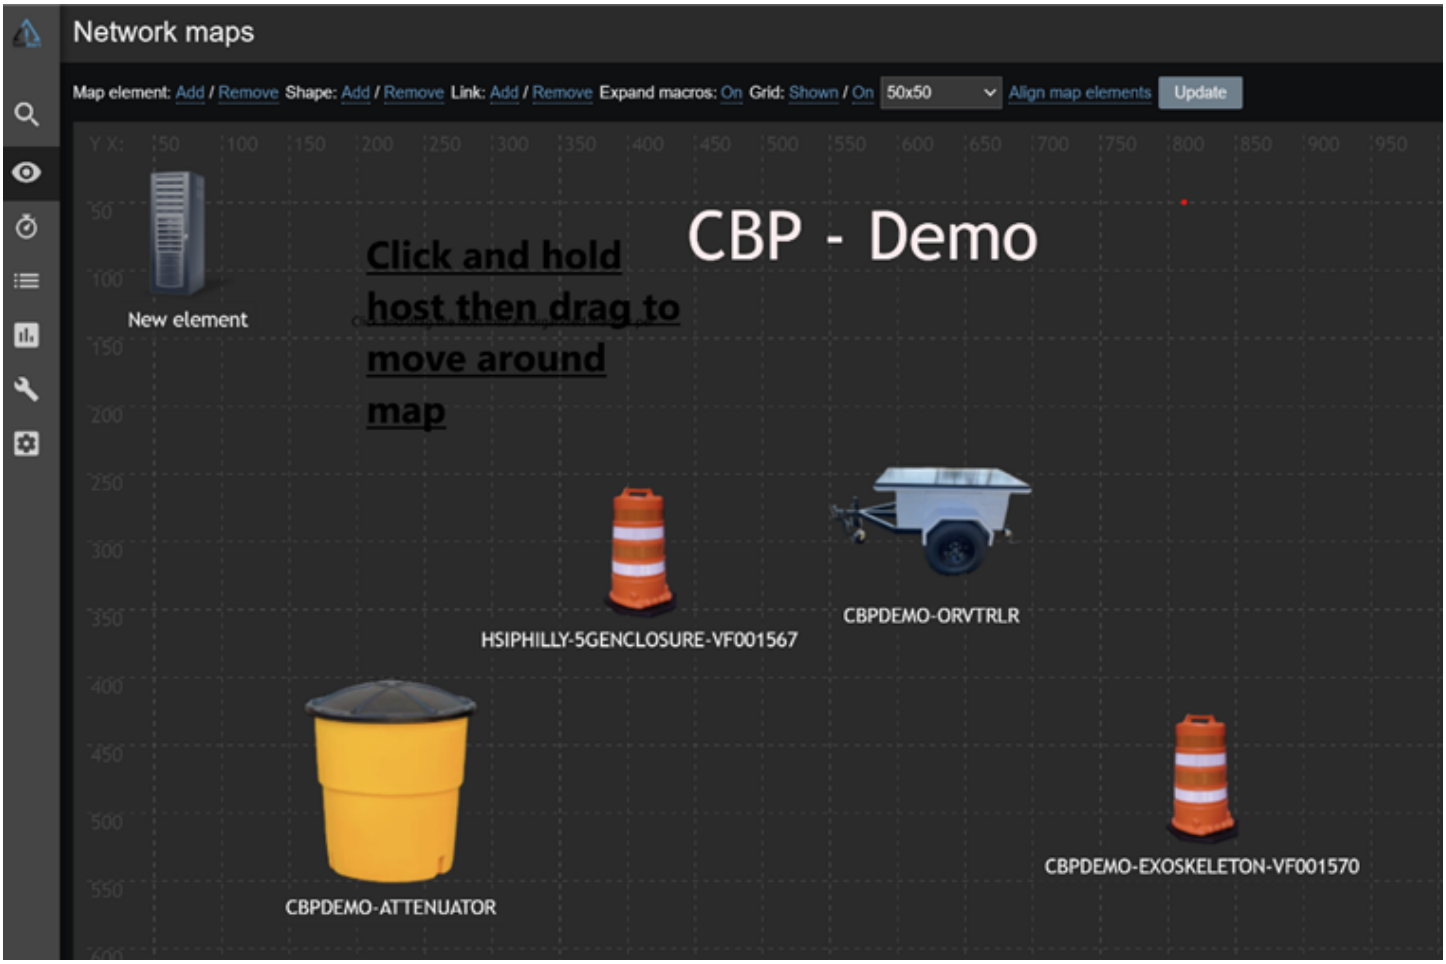

Apply Changes

Once finished, click **Apply** in the small window. Move the icon to the desired location on the map.

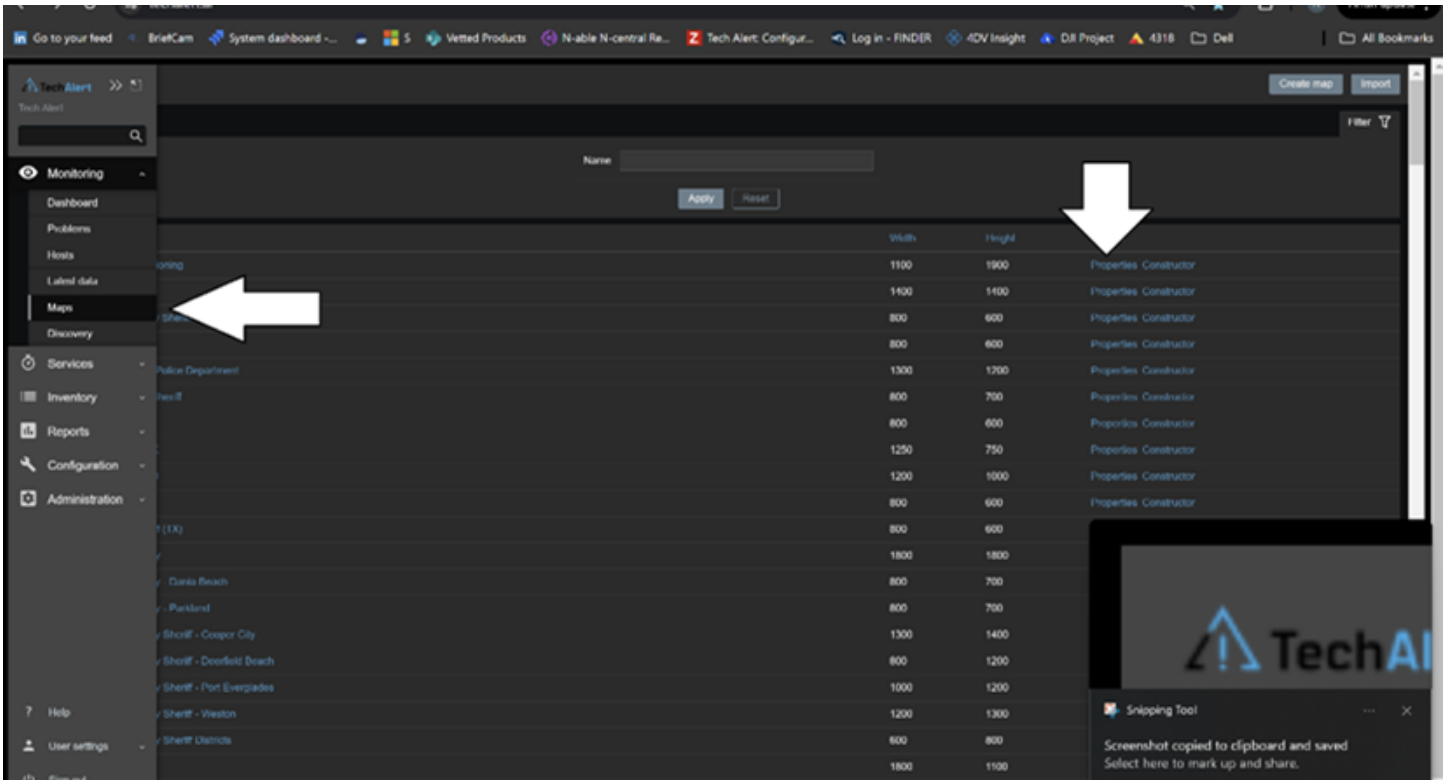

Adjust Map Size (if needed)

If there's not enough space on the page, select **Update** at the top of the page.

Expand Map Dimensions

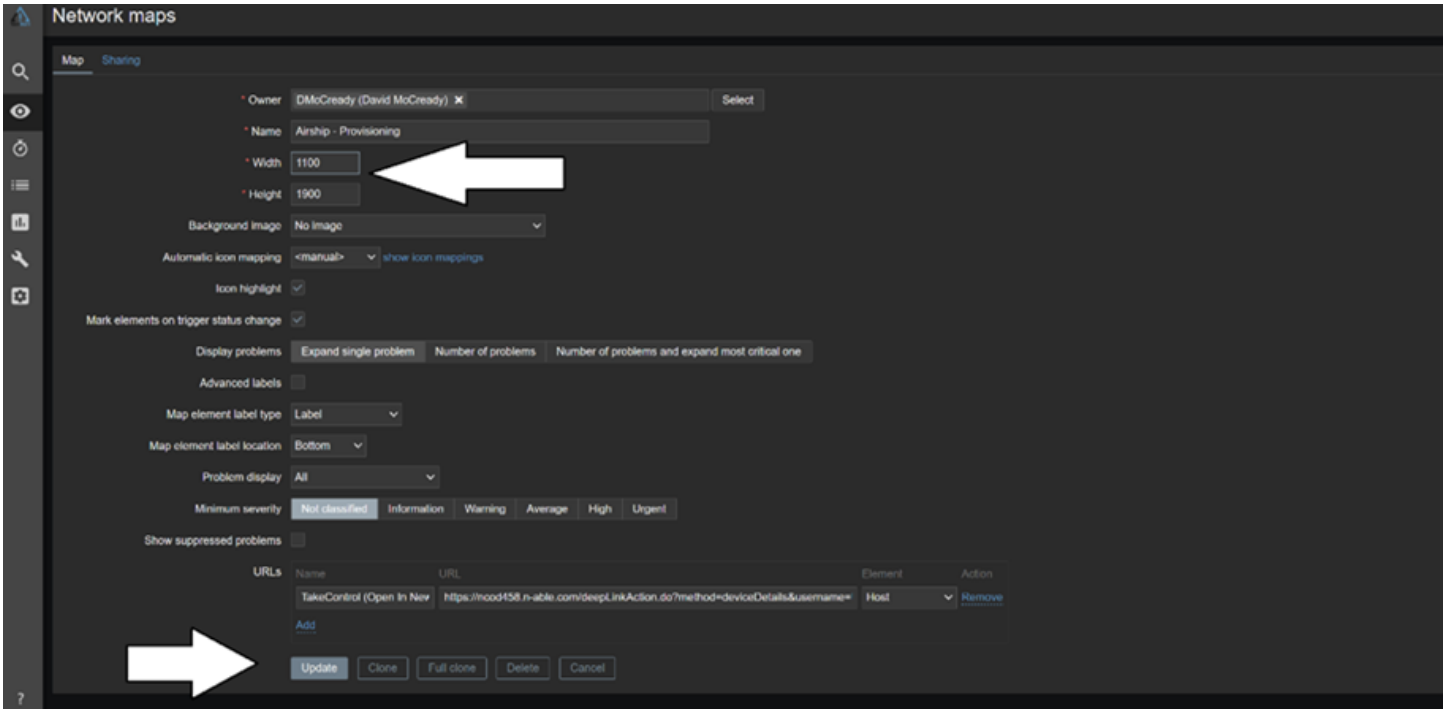

Under Monitoring, click **Maps** and ensure all filters in the filter bar are clear. Select the appropriate map for the customer site.

Add Height to Map

Find your map in the list, then select **Properties** on the right.

Add 200 pixels to the height value and select **Update** to create more room on the map.

If assistance is required for network or firewall setup, please contact the TechAlert support team.
