

BATTERY AND SOLAR UPGRADE PROGRAM

WHEN IT COMES TO PERFORMANCE AND LONGEVITY, WE'VE GOT YOUR SURVEILLANCE AND ALPR SOLUTIONS COVERED.

Vetted's Battery and Solar Upgrade Program is designed to make it easy to upgrade your current public safety equipment with the latest battery and solar technology to enhance operation times.

Upgrading your current equipment with new batteries and solar panels is a foolproof way to extend operational runtime and the overall life of your public safety solution. Without incurring the cost of new equipment, this upgrade minimizes downtime while keeping your systems functioning at peak-performance.

BRINGING TOGETHER THE LATEST TECHNOLOGY TO ELEVATE YOUR SYSTEM

Advanced Battery System

Take advantage of extended operation times and recharge capabilities with the Lithium-Ion or AGM batteries, plus all systems include Victron battery protection.

The Lithium-Ion Systems include a smart charger and a management system to preserve and prevent damage.

Solar-Based Charging Technology

New durable and lightweight panels are the ideal way to increase output and reduce energy loss, even in high temperatures.

In reduced lighting, these panels have increased efficiency and reliability with greater power output due to the reduced loss between the cell fingers.
